

WE AMULET VIDEO-SURVEILLANCE DETECTOR

The device is designed for detecting and sweeping video-surveillance units anywhere independently of their video - signal processing and transmitting modes.

It is possible to detect hidden video cameras and evaluate the distance to the detected units.

The device may be used either in the sweep or in the alarm modes.

The operation principle is based on both environmental electromagnetic analysis and recognition of the RF emission from the video-surveillance units.

The device may be easily controlled and its operation doesn't require specific knowledge and skills.

In order to evaluate the distance to the hidden video- surveillance units the device is equipped with an external probe.

Specifications:	
Detection distance:	6 - 10 m.
Detection time:	from 50 sec to 6 min.
Power supply:	AC 220 V, DC 12 V, built-in rechargeable battery.
Operation time from battery:	not less than 2 hours.
