

WE NG84

Acoustic noise generator 84 Db

The NG 84 Acoustic Noise Generator is intended for the protection of the privacy and its conversations, protecting against and rendering useless any kind of devices used for transmission of discussions.

Main function is the generation of the white noise in the acoustic range of frequencies, which ensures a enormous reduction of speech clearness (up to a complete incomprehensibility). Transmission and recording by different espionage devices becomes inefficient.

WE NG 84 may be used as stationary unit powered by mains (adapter included) and also as portable unit, powered by an accumulator battery.

WE NG 84 is an effective security tool that protects spaces up to max. 50 m³. As the white noise is generated in the frequency range of human speech a certain degree of discomfort is the logical consequence.

Specification:

Frequency range as dependent on sound pressure, at a deviation of 15 dB	400 - 8000 Hz
Maximum sound pressure	> 84 dB
Power supply	9 V
Current consumption	< 200 mA
Dimensions:	111 x 70 x 22 mm
Weight	0.20 kg
