

WISE EYE Integrated Security Solutions

WEFB 7000 Multipurpose Flexible Fiberscope

One of our newly-manufactured excellent fiberscope series in 2007
Use for inspecting smuggling of contrabands, drug and guns for example, by ships, boats or trucks...etc.

They always hide those contrabands in places that are difficult to reach and check, such as secret cabinet, water or fuel tank, ceiling, bulkhead, and etc
Secret inside-house checking for attacking preparation by policemen or Special Forces

WEFB-7000 Endoscope is highly mobile and flexible and can be probed from any direction and angle into the target areas where human eyes can not observe. It comes with a remote 4-way (two axis) control, so the users can rapidly see and inspect if there is anything hidden in the target areas without dismantling or damaging any object or structure. By using EVD Endoscope, the mission officers can increase their efficiency on one hand; and on the other hand, they can collect information or identify threat from a protected position, and therefore decrease their risk

There is a hand-held 3.5 inch LCD showing simultaneously the vision and sound detected by the endoscope. The built-in wireless transmission can send the audio and video output up to a distance of 300 meters

The endoscope is also equipped with a light source (75W) to see clearly any object within 4 meters at complete darkness

Expandable carbon fiber wrap around tube can be used for observing environment that is difficult to reach:

Made of carbon fiber, light weight and rust proof.

Can be adapted to the endoscope quickly and easily.

Total length of 190 cm for easy observation for places several meters above ground.

WISE EYE Integrated Security Solutions

Features:

4-way, two axis (up/down and left/right) mechanism to control the movement of the endoscope

Can be used in water or any liquid, because it is water and oil proof, withstanding weak acid and weak alkaline solution

3.5 inches color LCD

75 W light source unit for detection in dark environment

The detected vision and sound can be output directly to recorder or wireless receiver for simultaneous monitoring and recording

Using rechargeable cartridge battery as power source for easy change during operation

Using expandable carbon fiber wrap around tube for extended range observation and search

Built-in "Wireless vision/sound transmit module for intercom during operation

Example for searching the secret cabinet of a boat
